

Electronic design consultancy races ahead in Silverstone

25 March 2010

Silverstone, Northamptonshire

High-technology electronic design consultancy, Partner Electronics Limited, is moving to larger business premises in Silverstone. This strategic move will provide additional and enhanced working space to support the growth of the company over the coming years. Partner Electronics has continued to expand its business despite the challenges of the current recession.

Founded in 2007 Partner Electronics has operated from the Silverstone Innovation Centre for the last two and a half years. The company is now moving to substantially larger premises at New Rookery Farm, close to Silverstone village.

Richard Rydon, co-founder & Technical Director commented: “The Silverstone Innovation Centre has supported us well during our company inception and initial growth phase. The serviced office concept allowed us to concentrate on establishing our business and running projects for clients. It has also been helpful to be in the presence of other small to medium sized businesses in this prestigious location. However, the company now requires additional and more versatile space to ensure that we continue to deliver excellent customer service as we grow”.

The new business unit has nearly double the working space of the existing facility. It also supports separate office, testing laboratory and assembly areas as well as providing a conference room suitable for client meetings.

“These are exciting times for our company. We are continually looking for ways to improve the products & service that we offer to our clients without losing touch with the collaborative spirit that makes Partner Electronics a great place to work” stated Steven Borley, co-owner of Partner Electronics.

About Partner Electronics:

Partner Electronics is an electronic design consultancy that works closely with manufacturers of technology products and consumer electronic equipment to support their design & development efforts. In addition to technical skills, Partner Electronics offers a flexible and cost-effective resourcing capability focussed on rapid delivery of high-quality solutions.

The core team includes highly-skilled, qualified and experienced engineers with a broad range of technical competences in the fields of analogue and digital electronics, micro-processor programming and real-time software. This team is complimented by part-time & contract staff to perform electronic assembly, marketing, business development and other tasks as required.

Partner Electronics' clients include a broad range of organisations across the industrial & consumer electronics manufacturing sectors, helping them take products from concept through to development. The products themselves range from battery/charging systems, iPhone applications/accessories and hand-held instruments through to high-end radio-frequency and opto-electronics communication systems.

More information on Partner Electronics can be found at www.partnerelectronics.com.
